B.	SHELF/SERVICE LIFE DATA FOR ARMY CLASS V MATERIEL		B-1
C.	AMMUNITION LOTS CLEARED FOR OVERHEAD FIRE		C-1
D.	AMMUNITION LOTS NOT SUITABLE FOR OVERHEAD FIRE		D-1
E.	AMMUNITION FUNCTIONALLY UNSERVICEABLE		E-1

1-1. Purpose. This bulletin provides a listing of restricted or suspended munitions which will assist those responsible for storage, issue, use, testing, inspection and transportation of Class V materiel.

1-2. Scope. This bulletin is applicable to all Department of the Army activities with mission responsibility for storage, issue, use , test, and transportation of Class V materiel that is managed by the US Army Armament, Munitions and Chemical Command (AMCCOM).

1-3. Definitions. *a. Suspended Munitions.* Munition items which are withdrawn from either issue, movement, test and/or use, with or without qualifications, due to a suspended or confirmed unsafe or other defective condition.

b. Types of Suspensions.

(1) Temporary suspension. An interim order prohibiting either issue, movement, and/or use of a munition item, with or without limitation, due to a suspected unsafe or other defective condition. (Munitions are temporarily suspended as a result of firing and handling malfunctions and other failure conditions pending investigations of the circumstances and involved munitions.)

(2) Permanent Suspension. A permanent order based on an engineering evaluation that prohibits the issue, movement, test and/or use of a munitions item, with or without limitations, due to a confirmed unsafe or other defective condition. (Munitions are permanently suspended as a result of an investigation which confirms that the involved muntions are unsafe or otherwise defective.) Munitions permanently suspended will have a fix (restoring action) assigned. For the few instances where a munition item is permanently suspended and action to restore has not been determined, the "fix" entry will read: "No fix authorized", or, "fix undetermined at this time".

c. Limitations.

(1) Suspended from issue, movement and use (SIMU). A qualification to a suspension order prohibiting the issue, movement and use of a munitions item under any circumstance due to a suspected or confirmed unsafe condition. Munitions in this category are extremely dangerous to fire, handle, move or transport. All such items are designated SIMU in the limitations column. SIMU assigned to lots permanently suspended with a fix assigned, *are not* to be worked until special handling instructions are provided by AMCCOM Maintenance.

(2) Suspended from issue and use (SIU). A qualification to a suspension order prohibiting the issue and use of a munitions item due to a suspected or confirmed unsafe condition. Munitions in this category are dangerous to fire or function, no movement, handling or transporting limitations are imposed. All such items are designated SIU in the limitations column.

d. Restriction. An order which places special operating limits on the use of munitions for reasons of safety or degraded performance.

*This bulletin supersedes TB 9-1300-385, 5 JUL 1985, includes Ammunition Supplemental Notices 85-251 thru 85-370 as applicable.

CAUTION

1. The restrictions listed in Appendix A are in addition to the precautions, warnings, and restrictions pertaining to firing specific rounds as stated in the FM's, TM's, TB's and firing tables.
2. When a lot that is both suspended and restricted is reworked, and the fix that is being applied to restore the item to a serviceable condition will not correct the restriction, the installation performing the rework will notify USA AMCCOM, AMSMC-QAS-P, listing the basic lot number and any additional lot suffix or local lot number that was assigned. Conversely, the same procedure will apply when a previously unrestricted item/lot becomes restricted due to the modification of one end item to a new end item. The USA AMCCOM, AMSMC-QAS-P will issue an interim change to this bulletin assigning the restriction to the new lot.

e. Release Action. An order which rescinds a previously imposed suspension, or restriction. Munitions may be released from suspension with a restriction applied.

f. Shelf Life. The total period of time, beginning the date of manufacture/cure/assembly that an item may remain in the combined wholesale (including manufacturer) and retail storage system and still remain suitable for issue to, and use by the end user (shelf life is not to be confused with service life which is a measurement of anticipated total in-use time).

1-4. General. *a.* The US Army Armament, Munitions and Chemical Command (AMCCOM), Rock Island, IL 61299-6000 is responsible for the preparation and maintenance of this bulletin.

(1) Revision of this bulletin is accomplished quarterly or on an as required basis. Ammunition Supplemental Notices will be disseminated for all changes to keep this bulletin current between revisions.

(2) Munitions released from this bulletin will be reflected in the identification data for one revision following the distribution of the Ammunition Supplemental Notice.

b. A munitions item suspected of being unsafe or otherwise defective and placed under a temporary suspension order is to be afforded the same precaution and significance as an item which has been confirmed as being unsafe or otherwise defective and placed under a permanent suspension order.

c. Permanently suspended munitions require either renovation, modification, or inspection, for restoration to a usable condition or may be recommended for demilitarization due to involved hazards, major component failure, etc., as determined by the appropriate investigative authority.

d. Installations and activities will comply with the instructions provided by the NMP in response to ACRs submitted on permanently suspended munitions.

e. Suspension and restriction orders normally pertain to individual lots, lot series (lot interfix numbers) or munitions type (all lots.)

f. All suspended munitions listed in this bulletin are considered suitable for emergency combat issue and use, except those items with a limitation of SIMU, SIU and training items (except 20-mm TP) (see para 1-3c.)

g. Restriction and use limitations contained herein are not intended to conflict with requirements of AR 385-63, and must not be interpreted as replacing any requirements therein.

h. Where munitions have been returned to the supply system by another service or country and the suspension status requires clarification, queries are to be directed to USA AMCCOM, ATTN: AMSMC-QAS-P, Rock Island, IL 61299-6000.

i. Ammunition supplemental notices will identify the class of suspensions as A or B as it relates to hazard and usage; classes are defined as follows:

(1) Class A—Munitions that endanger life and/or materiel (See AR 75-1).

(2) Class B—All munition malfunctions other than Class A.

j. Recipients of Ammunition Supplemental Notices on initial Suspension/Restriction must assure that use of the specific lot is withheld to include 24 hour notification to training ranges and test sites.

k. A suspension or restriction of a lot number or group of lot numbers under a specific NSN or a zero-filled NIIN applies to that lot number or group of lot numbers in other NSN's for that nomenclature item.

l. Where a notice of suspension or restriction identifies a specific component or subassembly by model and lot number, the suspension or restriction applies to all items utilizing the affected components or subassemblies. The restriction or suspension will remain in effect until released or a fix has been prescribed and the necessary maintenance, tests or inspections have been accomplished. This applies to installed components or those packed with an end item included for field assembly. When an item is permanently suspended and a fix is not authorized or provided, the lot will be maintained in the original suspended code until a fix is furnished. Items/lots on hand in this category not listed in this Technical Bulletin will be reported to USA AMCCOM, ATTN: AMSMC-QAS-P for necessary suspense or restriction action.

m. Periodically, this bulletin will be reviewed to remove all items by NSN wherein the NSN has been deleted from the Federal Cataloging System and where no known assets are reflected in the supply system. Stocks on hand or subsequently received from another service or unit wherein the applicable NSN has been deleted from the Federal Cataloging System and which do not appear in this bulletin will be reported to USA AMCCOM, ATTN: AMSMC-QAS-P requesting verification by lot number as to whether the lot(s) had been previously suspended or restricted. This does not eliminate the requirements for submitting a DA Form 1669 (Request for National Stock Number and Department of Defense Identification Code for Ammunition and Explosive Supplies) in accordance with TB 9-1300-256.

n. Temporary condition codes J or N appearing in Ammunition Supplemental Notices are assigned by AMCCOM, AMSMC-QAS.

o. The recommended condition code contained on permanent suspension messages and this publication is based solely on the "fix". Installations and activities therefore must consider both local inspection results along with the "fix" code when assigning suspension codes. It is important to realize that recommended condition codes listed in permanent suspension messages and this publication do not necessarily override a locally imposed condition code, but shall do so if the locally assigned condition code is less restricted.

1-5. Composition and Use. This bulletin consists of Identification Data, and appendices A, B, C, D, and E.

a. Identification Data. This data is a listing of items either by nomenclature, Federal Recognized Number (National Stock Number (NSN), Drawing Number or Specification Number where no NSN is applicable) and when used contains the following data in columnar form:

(1) Federally recognized number. A number assigned to each item of supply for identification purposes. It takes the following forms:

(a) National stock number. NSNs are in sequence, by Federal Supply Class (FSC), Department of Defense Identification Code (DODIC), and National Item Identification Number (NIIN).

(b) Specification number. Specification number is identified by the abbreviation "SPEC NO." which is not part of the actual specification number.

(c) Drawing number. Drawing number is identified by the abbreviation "DRAW NO." which is not part of the actual Drawing Number.

(2) Generic description. Will consist of an approved item name and model number.

(3) Lot number. A number systematically assigned to each Ammunition Lot (MIL-STD-1168A). Due to the number of lots which could be involved in a blanket-type suspension or restriction, a group statement wherever applicable will be used in lieu of lot numbers. Some examples are as follows:

(a) All lots.

(b) All lots LS (All lots manufactured by a given manufacturer as illustrated by all lots manufactured by Lone Star AAP.)

(c) All lots P0669 (All lots manufactured prior to a given month and/or year as illustrated by all lots manufactured prior to June 1969.)

(d) All LS-1 or LS-75A006 (all lots manufactured by a given manufacturer and interfix.)

(4) Limitations. A qualification to a suspension precluding use for emergency combat.

(5) Restriction. Restricted to specified uses or conditions.

(6) Release. Self-explanatory.

(7) Reasons. Brief explanation of the reason for suspension; e.g., premature detonation, inbore premature.

(8) Fix. Indicates a certain action that will be required to restore that item to a serviceable condition or to indicate demilitarization. This action will replace the reason when the lot is transferred to permanent suspension. When a fix is not authorized the lot will be maintained in the original suspended condition code.

b. Appendix A. Appendix A contains restriction codes with corresponding definitions.

c. Appendix B. Appendix B contains Shelf and Service Life for Army items. Changes to Shelf and Service Life will appear in Ammunition Supplemental Notices between quarterly revisions to TB 9-1300-385.

d. Appendix C. Appendix C contains lot numbers of ammunition determined to be functionally suitable for use in overhead and flanking fire exercises. Limitations in current AR's and TM's will apply.

e. Appendix D. Appendix D contains lot numbers of ammunition not suitable for overhead fire. This listing is a result of candidate lots submitted for overhead fire clearance and found not to be acceptable. This is not a criterion for change of condition code.

f. Appendix E. Appendix E contains ammunition items extracted from Ammunition Information Notices. These items have been evaluated to be functionally unserviceable, based on results of Ammunition Stockpile Reliability Test Program. Items are listed by NSN, nomenclature, lot number, and reason for unserviceability. Appendix E is in the process of being deleted with functionally unserviceable lots either restricted, suspended or deleted due to lack of visible assets.

1-6. Reporting. *a.* DA PAM 738-750 provides guidance for the preparation and submission of reports (where applicable).

b. Stocks of temporarily suspended munitions listed in this bulletin or Ammunition Supplemental Notices will be reported by electrical message to CDR, AMCCOM, ROCK ISL IL//AMSMC-QAS-P// and //AMSMC-QAK// or //AMSMC-QAL//, with information copies to CDR, AMCCOM, AMSMC DOVER NJ//AMSMC-DSM// or CDR, AMCCOM, APG MD//AMSMC-DSM// as applicable, in accordance with Ammunition Supplemental Notices.

1-7. Special issue of Suspended Munitions. The prohibition against issue and use (except SIMU items) of a suspended munition lot is not applicable when:

a. Shipment is directed by AMSMC-QAS to a proving ground or other test agency for special testing or investigation.

b. Shipment of permanently suspended munitions with authorized "fix" when directed by the NICP for modification, renovation or remanufacture.

1-8. References. *a.* AR 385-63 (Regulations for Firing Ammunition for Training, Target Practice and Combat.)

b. AR 75-1 (Malfunction Involving Ammunition and Explosives.)

c. DA PAM 738-750 (The Army Maintenance Management Systems (TAMMS)).

1-9. Recommended Changes. Recommendations for improvement of procedures set forth in this bulletin, or request for clarification and/or interpretation, are invited and should be reported on DA Form 2028 (Recommended Changes to Publications and Blank Forms). DA Form 2028 prepared on this bulletin will be forwarded through command channels to major commands. Major commands will forward direct to Commander, US Army Armament, Munitions and Chemical Command, ATTN: AMSMC-QAS-P, Rock Island, IL 61299-6000.

1-10. Identification Data. International Logistic problems on identification data in this bulletin will be forwarded through command channels to Commander, US Army Armament, Munitions and Chemical Command, ATTN: AMSMC-ILO-R, Rock Island, IL 61299-6000.
